Frontend Assignment

Important Notes

- You must code the solution in HTML5, CSS3 and Vanilla JavaScript / React.
- Please refrain from using external packages which are not required. For example, do not use any UI library.
- You can use any open API libraries for data and images.
- You can be as creative with the design as you can.
- Please create a Github repo and post your code on the repo with proper commits.
- Publish your app on any free hosting platforms
- Share the final link of the Github repo and hosted app with us.

Things to do

- Create the page with the list of movies
- Create a Trailer video component
- Render the Trailer just beneath the row when a movie card is clicked
- Create a search box through which users can search for a movie, Users should also be able to quickly type into the search box using `ctrl + k` as a shortcut.

Brownie points for -

- Polished CSS
- Error Handling
- Commented code blocks
- Highly reusable components
- Performant code
- README file
- Unit Tests
- Structured commits & proper commit messages
